# About Siren

Siren provides the leading Investigative Intelligence platform to some of the world's largest and most complex organizations for Investigative Intelligence on their data. Rooted in academic R&D in information retrieval, distributed computing, and knowledge representation, the Siren Platform™ provides integrated Investigative Intelligence combining the previously disconnected capability of search, business intelligence, link analysis, and big data operational logging and alerting.

Siren was a spin out from advanced Data Science research in the area of the "Semantic Web". Dr. Giovanni Tummarello and Dr. Renaud Delbru led a team of over 30 researchers at the National University Galway, Ireland in collaboration with the Massachusetts Institute of Technology (MIT). This research focused on how to drive meaning out of data with a particular focus on search. Siren is the direct result of that research.

Siren became a product company in 2016 and has been successfully deployed in industries such as Law Enforcement & Intelligence, Financial Crime, and Cyber Security. Siren's headquarters are in Galway, Republic of Ireland, with offices in Europe and in the USA.

Siren has been recognized as a 2020 Cool Vendor in the Analytics and Data Science category by Gartner. Siren has also established an OEM partnership with Elastic to provide pioneering investigative intelligence capabilities for organizations and institutions within the U.S. Public Sector.

Among Siren awards are Technology Innovation of the Year and the Irish Startup of the Year (Ireland's National Tech Excellence awards).
